# The setouterhbox package

# Heiko Oberdiek\* <heiko.oberdiek at googlemail.com>

## 2016/05/16 v1.8

#### Abstract

If math stuff is set in an \hbox, then TeX performs some optimization and omits the implicite penalties \binoppenalty and \relpenalty. This packages tries to put stuff into an \hbox without getting lost of those penalties.

## 1 Documentation

#### 1.1 Introduction

There is a situation in hyperref's driver for dvips where the user wants to have links that can be broken across lines. However dvips doesn't support the feature. With option breaklinks hyperref sets the links as usual, put them in a box and write the link data with box dimensions into the appropriate \specials. Then, however, it does not set the complete unbreakable box, but it unwrappes the material inside to allow line breaks. Of course line breaking and glue setting will falsify the link dimensions, but line breaking was more important for the user.

## 1.2 Acknowledgement

Jonathan Fine, Donald Arsenau and me discussed the problem in the newsgroup comp.text.tex where Damian Menscher has started the thread, see [1].

The discussion was productive and generated many ideas and code examples. In order to have a more permanent result I wrote this package and tried to implement most of the ideas, a kind of summary of the discussion. Thus I want and have to thank Jonathan Fine and Donald Arsenau very much.

Two weeks later David Kastrup (posting in comp.text.tex, [2]) remembered an old article of Michael Downes ([3]) in TUGboat, where Michael Downes already presented the method we discuss here. Nowadays we have  $\varepsilon$ -TEX that extends the tool set of a TEX macro programmer. Especially useful  $\varepsilon$ -TEX was in this package for detecting and dealing with errorneous situations.

However also nowadays a perfect solution for the problem is still missing at macro level. Probably someone has to go deep in the internals of the TeX compiler to implement a switch that let penalties stay where otherwise TeX would remove them for optimization reasons.

#### 1.3 Usage

Package loading. LATEX: as usually:

\usepackage{setouterhbox}

The package can also be included directly, thus plain TeX users write:

\input setouterhbox.sty

**Register allocation.** The material will be put into a box, thus we need to know these box number. If you need to allocate a new box register:

```
IATEX: \langle name \rangle plain TEX: \langle name \rangle
```

Then  $\langle name \rangle$  is a command that held the box number.

Box wrapping. LATEX users put the material in the box with an environment similar to lrbox. The environment setouterhbox uses the same syntax and offers the same features, such as verbatim stuff inside:

```
\begin{setouterhbox}{\langle box\ number \rangle}...\end{setouterhbox}
```

Users with plain T<sub>F</sub>X do not have environments, they use instead:

In both cases the material is put into an  $\hox$  and assigned to the given box, denoted by  $\langle box \ number \rangle$ . Note the assignment is local, the same way lrbox behaves.

**Unwrapping.** The box material is ready for unwrapping:

### 1.4 Option hyperref

Package url uses math mode for typesetting urls. Break points are inserted by \binoppenalty and \relpenalty. Unhappily these break points are removed, if hyperref is used with option breaklinks and drivers that depend on pdfmark: dvips, vtexpdfmark, textures, and dvipsone. Thus the option hyperref enables the method of this package to avoid the removal of \relpenalty and \binoppenalty. Thus you get more break points. However, the link areas are still wrong for these drivers, because they are not supporting broken links.

Note, you need version 2006/08/16 v6.75c of package hyperref, because starting with this version the necessary hook is provided that package setouterhbox uses.

```
\usepackage[...]{hyperref}[2006/08/16]
\usepackage[hyperref]{setouterhbox}
```

Package order does not matter.

#### 1.5 Example

```
1 (*example)
2 \documentclass[a5paper]{article}
3 \usepackage{url}[2005/06/27]
4 \usepackage{setouterhbox}
6 \newsavebox{\testbox}
9 \setlength{\parskip}{2em}
10
11 \begin{document}
12 \raggedright
13
14 \url{http://this.is.a.very.long.host.name/followed/%
15 by/a/very_long_long_long_path.html}%
16
17 \sbox\testbox{%
   \url{http://this.is.a.very.long.host.name/followed/%
19 by/a/very_long_long_long_path.html}%
20 }%
21 \unhbox\testbox
22
23 \begin{setouterhbox}{\testbox}%
24 \url{http://this.is.a.very.long.host.name/followed/%
25 by/a/very_long_long_long_path.html}%
```

```
26 \end{setouterhbox}
27 \unhbox\testbox
28
29 \end{document}
30 \langle /example \rangle
```

## 2 Implementation

Internal macros are prefixed by \setouterhbox, @ is not used inside names, thus we do not need to care of its catcode if we are not using it as LATEX package.

#### 2.1 Package start stuff

```
31 (*package)
```

Prevent reloading more than one, necessary for plain TEX: Reload check, especially if the package is not used with LATEX.

#### Interface macros 2.2

\setouterhboxBox

The method requires a global box assignment. To be on the safe side, a new box register is allocated for this global box assignment.

144 \newbox\setouterhboxBox

\setouterhboxFailure Error message for both plain TeX and LATeX

```
145 \begingroup\expandafter\expandafter\expandafter\endgroup
146 \expandafter\ifx\csname RequirePackage\endcsname\relax
    \input infwarerr.sty\relax
148 \else
    \RequirePackage{infwarerr}[2016/05/16]%
149
150 \fi
151 \edef\setouterhboxFailure#1#2{%
     \expandafter\noexpand\csname @PackageError\endcsname
152
        \{\text{setouterhbox}\}\{\#1\}\{\#2\}\%
153
154 }
```

#### 2.3Main part

eTeX provides much better means for checking error conditions. Thus lines marked by "E" are executed if eTeX is available, otherwise the lines marked by "T" are used.

```
155 \begingroup\expandafter\expandafter\expandafter\endgroup
156 \expandafter\ifx\csname lastnodetype\endcsname\relax
157 \catcode'T=9 % ignore
158 \catcode'E=14 % comment
159 \else
160 \catcode'T=14 % comment
161 \catcode'E=9 % ignore
162 \fi
```

\setouterhboxRemove

Remove all kern, glue, and penalty nodes; poor man's version, if  $\varepsilon$ -T<sub>F</sub>X is not available

```
163 \def\setouterhboxRemove{%
164 E \ifnum\lastnodetype<11 %
165 E
      \else
      \ifnum\lastnodetype>13 %
166 E
167 E.
      \else
168
       \unskip\unkern\unpenalty
        \expandafter\expandafter\setouterhboxRemove
169 E
170 E \fi
171 E \fi
172 }%
```

\setouterhbox Passing the box contents by macro parameter would prevent catcode changes in the box contents like by \verb. Also \bgroup and \egroup does not work, because stuff has to be added at the begin and end of the box, thus the syntax  $\strut_{one} \strut_{one} \st$ get an environment setouterhbox if LATEX is used.

```
173 \def\setouterhbox#1{%
    \begingroup
174
      \def\setouterhboxNum{#1}%
175
176
      \setbox0\vbox\bgroup
```

```
177 T
                           \kern.123pt\relax % marker
                           \kern0pt\relax % removed by \setouterhboxRemove
                   178 T
                           \begingroup
                   179

#### 4 Installation

#### 4.1 Download

433 \end{document}

432

434 (/test2)

**Package.** This package is available on CTAN<sup>1</sup>:

CTAN:macros/latex/contrib/oberdiek/setouterhbox.dtx The source file.

<sup>&</sup>lt;sup>1</sup>http://ctan.org/pkg/setouterhbox

**Bundle.** All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

#### CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TeX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

#### 4.2 Bundle installation

**Unpacking.** Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

#### 4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain T<sub>F</sub>X:

```
tex setouterhbox.dtx
```

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

#### 4.4 Refresh file name databases

If your TEX distribution (teTEX, mikTEX, ...) relies on file name databases, you must refresh these. For example, teTEX users run texhash or mktexlsr.

#### 4.5 Some details for the interested

Unpacking with IATEX. The .dtx chooses its action depending on the format: plain TEX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{setouterhbox.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

\PassOptionsToClass{a4paper}{article}

An example follows how to generate the documentation with pdfLATEX:

```
pdflatex setouterhbox.dtx
makeindex -s gind.ist setouterhbox.idx
pdflatex setouterhbox.dtx
makeindex -s gind.ist setouterhbox.idx
pdflatex setouterhbox.dtx
```

## 5 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is setouterhbox.xml.

```
435 (*catalogue)
436 <?xml version='1.0' encoding='us-ascii'?>
437 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
438 <entry datestamp='$Date$' modifier='$Author$' id='setouterhbox'>
    <name>setouterhbox</name>

    <copyright owner='Heiko Oberdiek' year='2005-2007'/>
443
    clicense type='lppl1.3'/>
444 <version number='1.8'/>
    <description>
     If math stuff is set in an <tt>\hbox</tt>, then TeX
446
      performs some optimization and omits the implicit
447
448
      penalties <tt>\binoppenalty</tt> and <tt>\relpenalty</tt>.
      This packages tries to put stuff into an <tt>\hbox</tt>
449
      without losing those penalties.
450
451
      The package is part of the xref refid='oberdiek'>oberdiek bundle.

## 7 History

## [2005/10/05 v1.0]

• First version.

## [2005/10/07 v1.1]

• Option hyperref added.

## [2005/10/18 v1.2]

• Support for explicit line breaks added.

## [2006/02/12 v1.3]

- DTX format.
- Documentation extended.

## [2006/08/26 v1.4]

• Date of hyperref updated.

## [2007/04/26 v1.5]

• Use of package infwarerr.

## [2007/05/17 v1.6]

• Standard header part for generic files.

## [2007/09/09 v1.7]

• Catcode section added.

#### [2016/05/16 v1.8]

• Documentation updates.

#### 8 Index
