The ifluatex package

Heiko Oberdiek* <heiko.oberdiek at googlemail.com>

2016/05/16 v1.4

Abstract

This package looks for LuaTeX regardless of its mode and provides the switch \iffuatex. Also it makes \luatexversion available if it is not present. It works with plain TeX or \LaTeX

1 Documentation

The package ifluatex can be used with both plain TEX and LATEX:

```
\label{eq:plain TeX: input iffuatex.sty} $$IATEX 2_{\varepsilon}: \spackage{iffuatex}$$ The package provides the switch \iffuatex: $$ \spackage provides the switc
```

Since version 0.39 LuaTeX only provides \directlua at startup time. Also the syntax of \directlua changed in version 0.36. Thus the user might want to check the LuaTeX version. Therefore this package also makes \luatexversion and \luatexrevision available, if it is not yet done.

If you want to detect the mode (DVI or PDF), then use package ifpdf. LuaTeX has inherited \pdfoutput from pdfTeX.

2 Implementation

```
1 (*package)
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with LATEX.

2.6 LuaT_EX v0.39

Starting with version 0.39 LuaTeX wants to provide \directlua as only primitive at startup time beyond vanilla TeX's primitives. Then \directlua exists, but \luatexversion cannot be found. Unhappily also the syntax of \directlua changed in v0.36, thus the user would want to check \luatexversion. Therefore we make \luatexversion available using LuaTeX's Lua function tex.enableprimitives.

336 (/test-reload2)
```

5 Installation

5.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/ifluatex.dtx The source file.

 ${\tt CTAN:} {\tt macros/latex/contrib/oberdiek/ifluatex.pdf} \ \ {\tt Documentation}.$

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TeX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

5.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

unzip oberdiek.tds.zip -d ~/texmf

¹http://ctan.org/pkg/ifluatex

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

5.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain TFX:

```
tex ifluatex.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
\label{eq:control_exp} \begin{array}{ll} \text{ifluatex.sty} & \rightarrow \text{tex/generic/oberdiek/ifluatex.sty} \\ \text{ifluatex.pdf} & \rightarrow \text{doc/latex/oberdiek/ifluatex.pdf} \\ \text{test/ifluatex-test1.tex} & \rightarrow \text{doc/latex/oberdiek/test/ifluatex-test1.tex} \\ \text{test/ifluatex-test2.tex} & \rightarrow \text{doc/latex/oberdiek/test/ifluatex-test2.tex} \\ \text{test/ifluatex-test3.tex} & \rightarrow \text{doc/latex/oberdiek/test/ifluatex-test3.tex} \\ \text{ifluatex.dtx} & \rightarrow \text{source/latex/oberdiek/ifluatex.dtx} \end{array}
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

5.4 Refresh file name databases

If your TEX distribution (teTEX, mikTEX, ...) relies on file name databases, you must refresh these. For example, teTEX users run texhash or mktexlsr.

5.5 Some details for the interested

Unpacking with IATEX. The .dtx chooses its action depending on the format: plain TEX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{ifluatex.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfIATEX:

```
pdflatex ifluatex.dtx
makeindex -s gind.ist ifluatex.idx
pdflatex ifluatex.dtx
makeindex -s gind.ist ifluatex.idx
pdflatex ifluatex.dtx
```

6 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is ifluatex.xml.

```
337 (*catalogue)
338 <?xml version='1.0' encoding='us-ascii'?>
339 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
340 <entry datestamp='$Date$' modifier='$Author$' id='ifluatex'>
341 <name>ifluatex</name>
342 <caption>Provides the \ifluatex switch.</caption>

```

7 History

[2007/12/12 v1.0]

• First public version.

[2009/04/10 v1.1]

- Test adopted for LuaTeX 0.39.
- Makes \luatexversion available.

[2009/04/17 v1.2]

- Fixes (Manuel Pégourié-Gonnard).
- \luatextrue and \luatexfalse are no longer defined.
- Makes \luatexrevision available, too.

[2010/03/01 v1.3]

• Line ends fixed in case \endlinechar = \newlinechar.

[2016/05/16 v1.4]

• Documentation updates.

8 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
